Mecánica - Conceptos básicos

Velocidad:

$$V = \frac{\Delta \chi}{\Delta t} \rightarrow V = \frac{\chi_F - \chi_o}{t_F - t_o}$$

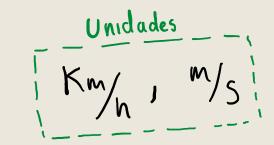

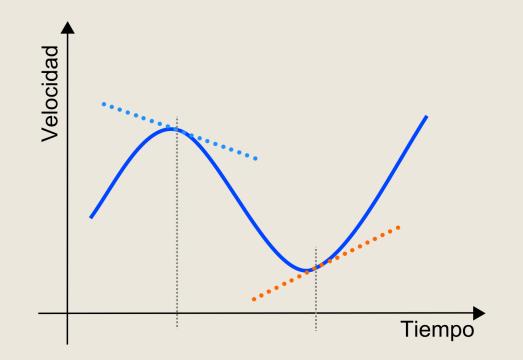

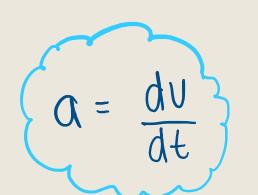

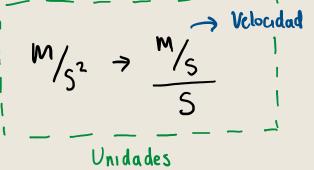

aceleración:

Variación de la velocidad

$$Q = \frac{\Delta V}{\Delta t} \rightarrow Q = \frac{V_F - V_o}{t_f - t_o}$$

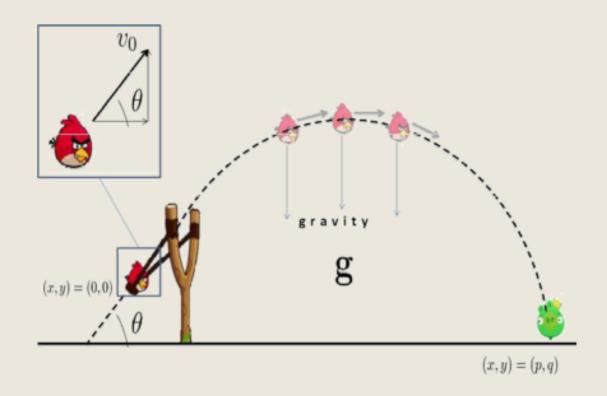

Leyes de Newton

Fuerza

Ocasiona un cambio en la velocidad (dirección o magnitud)

$$g = 9.81 \, \text{m/s}^2$$

Análisis del movimiento

$$V = \frac{\chi_{F} - \chi_{o}}{t_{F} - t_{o}}$$

$$V = \frac{\chi_{F} - \chi_{o}}{\Delta t}$$

$$V \Delta t = \chi_F - \chi_o$$

$$V\Delta t + \chi_o = \chi_F$$

$$\chi_F = \chi_0 + V\Delta t$$

$$V_F = V_0 + \alpha \Delta t$$

$$O_F = \frac{V_F - V_0}{\Delta t}$$

¡A LAS COMPUTADORAS!

Análisis del método

$$\chi = \chi_0 + U\Delta t$$

$$V = V_0 + \Delta \Delta t$$

$$\mathcal{L} = ma$$

$$\alpha = \mathcal{L} = ma$$

$$\alpha = \mathcal{L} = ma$$

$$V = V_0 + \underbrace{\xi F}_{m} \Delta t \rightarrow \underbrace{Fara}_{\xi F=mg} \rightarrow V = V_0 + \underbrace{mg}_{m} \Delta t$$

$$V = V_0 + \frac{mg}{m} \Delta t$$
